Summary

- Full-Stack Engineer with 2+ years of software development experience building SaaS applications, web platforms, REST APIs, and AI-powered systems. Hands-on experience with React.js, Next.js, TypeScript, Node.js, Express.js, PostgreSQL, and MongoDB, with additional experience in Python, FastAPI, Redis, and RabbitMQ. Experienced in developing end-to-end application features, integrating third-party APIs, implementing authentication and role-based access control, and optimizing application performance. Improved API response latency by 35% and contributed to real-time AI monitoring systems processing 20+ concurrent CCTV streams. Experienced in building end-to-end web application features, integrating frontend interfaces with APIs, and delivering maintainable, reliable software.

Education

Graphic Era Hill University Dehradun, Uttarakhand

MCA (Aug. 2022 – July 2024) *BCA (Aug. 2018 – July 2021)*

Experience

Software Developer — SaaS & Real-Time Systems July. 2025 – present

Aucourant Technologies Pvt Ltd *Dehradun*

- Developed and maintained multi-tenant SaaS application features using Node.js, TypeScript, REST APIs, and modular service architecture.
- Implemented role-based access control (RBAC), authentication-related workflows, organization-level permissions, and secure data access.
- Built real-time communication and video-processing workflows using WebSockets, FFmpeg, Redis, and RabbitMQ.
- Integrated third-party services and subscription workflows, including Razorpay, scheduled jobs, and audit logging.
- Optimized API response latency by 35% through service refactoring and reusable middleware improvements.
- Contributed to AI-integrated video monitoring pipelines supporting 20+ concurrent CCTV streams and sub-200ms event detection latency .
- Developed and integrated frontend features with backend APIs, improving data flow and consistency across application workflows.

Software Developer Oct. 2024 – Jun. 2025

Cynoteck Technology Solution *Dehradun*

- Developed and integrated REST APIs using Node.js and Express.js for web application features and business workflows.
- Implemented backend business logic, database interactions, and API integrations to support reliable application functionality.
- Implemented JWT-based authentication and contributed to deployment workflows across multiple applications.
- Collaborated across frontend and backend workflows to integrate APIs, troubleshoot application issues, and resolve data-flow defects.
- Debugged application errors and improved API reliability through code changes and integration fixes.

Projects

Jobtourer | *AI-Powered Automation Platform — Next.js, TypeScript, PostgreSQL, Trigger.dev, Supabase* Jobtourer.app

- Architected a full-stack job automation platform that discovers opportunities from **8+ public job boards**, normalizes heterogeneous data sources, and ranks jobs using resume and profile-based matching algorithms.
- Built event-driven automation pipelines with **Trigger.dev** to execute scheduled job discovery, scoring, deduplication, recommendation generation, and workflow monitoring.
- Integrated **Google OAuth, GitHub OAuth, Better Auth, and Gmail API** to support secure authentication and reviewable application draft generation.

- Built responsive job discovery interfaces with search, filtering, pagination, and job recommendation features backed by PostgreSQL APIs.
- Developed modular services for authentication, resume parsing, job tracking, and Gmail draft generation, using reusable components and TypeScript-based architecture.
- Followed production-grade engineering practices including reusable service layers, provider abstraction, CI workflows, TypeScript-first development, and monorepo architecture.

Examora | *AI-Powered Exam Platform — Next.js, TypeScript, PostgreSQL, Gemini AI, OCR* examora.app

- Built an AI-powered examination platform that converts PDF and text-based question papers into interactive online exams with automated scoring, performance analytics, and answer evaluation.
- Implemented PDF parsing and OCR pipelines using pdf.js and Tesseract.js to extract and structure questions from both digital and scanned documents.
- Integrated Gemini AI to generate exams from topic prompts, provide step-by-step question explanations, and solve questions with AI-powered reasoning.
- Designed scalable REST APIs and modular backend services for exam management, attempt tracking, AI operations, and real-time result processing.
- Developed an interactive exam engine featuring timers, question navigation, mark-for-review functionality, automated grading, and detailed performance insights.
- Deployed production-ready application on Vercel with TypeScript-based architecture, validation layers, provider abstraction, and extensible database support.

Creche Management | *AI Video Monitoring SaaS — Node.js, Python, FastAPI, React.js, MongoDB ,Docker* Creche.app

- Built a real-time AI-powered child monitoring platform capable of processing and analyzing live CCTV camera streams.
- Developed Python FastAPI microservices for AI inference and event detection using YOLO and ArcFace models for face recognition, fall detection, child activity monitoring, and live event tracking.
- Implemented low-latency live video streaming and media processing pipelines using FFmpeg and WebSockets.
- Designed asynchronous event-driven workflows using Redis and RabbitMQ for background processing and inter-service communication.
- Engineered a scalable RBAC-based SaaS architecture supporting multiple user roles, permissions, subscription plans, and organization-level management.
- Integrated Razorpay payment gateway with automated subscription workflows, billing logic, and cron-based background jobs.
- Built audit logging, support ticketing, and activity tracking systems for monitoring, transparency, and operational debugging.
- Focused on real-time performance optimization, scalable backend design, and secure handling of sensitive user and video data.

Technical Skills

Languages: TypeScript, JavaScript, Python, SQL
Frontend : React.js, Next.js, Tailwind CSS, Responsive Web Interfaces
Backend : Node.js, Express.js, FastAPI, REST APIs, Microservices, WebSockets
Relational Databases & ORM : PostgreSQL, SQL, Prisma ORM
NoSQL & Caching : MongoDB, Redis
Messaging & Async Processing : RabbitMQ, Background Jobs, Event-Driven Workflows
Authentication & Integrations : JWT, OAuth, RBAC, Razorpay, Gmail API
AI & Document Processing : Gemini API, OCR, YOLO, ArcFace
Tools & DevOps : Git, GitHub Actions, CI/CD, Docker, Linux
